BAGLEY seed
B R A N D

STATE REGISTERED PLANT BREEDERS AND PRODUCERS

1962-63 Season

Dear Customer Friend:

Unusually favorable growing and harvesting weather in 1962 enabled us to get our seed crops gathered and housed earlier than for many years. We produced choice, prime quality, well-matured seed of our different strains of Hybrid Corn, Hybrid Sorghum, Open-Pollinated Corn, Open-Pollinated "Gold-Tex" Sorghum, Pedigreed Cottonseed and the new Sorghum-Sudan Grass Hybrid "Su-Tex". Also, our new hybrid sweet corn "Sweet-Tex 2", which has been produced in limited quantity, is ideal for home gardens and for the local roasting ear market.

Being practical dirt farmers ourselves we fully realize the importance of using the best in planting seed to recover the most from our harvests. We know that seeds that really PRODUCE (in fine yields and extra dollars per acre) are exactly what you want also. Our sole aim and desire has always been to help our customer growers make more crop profits by supplying them with the best quality seed possible.

Our latest folder enclosed lists and describes our various strains of seed. Some kinds will no doubt be booked up early. Please choose the strains you want and mail your order in to us or see our nearest dealer and book your needs with him. Handy order form with price list on back side is enclosed. We will be glad to serve you and appreciate your past business very much.

Sincerely yours,
W. W. BAGLEY & SONS

EXPERTLY PRODUCED BY

W. W. BAGLEY & SONS

MARTINDALE, TEXAS

Texas

NO. 26 A Double-cross Yellow Hybrid. An outstanding corn. All four inbred strains developed from native Texas varieties. A very good yielder—makes 20% to 35% more—matures early, being one of the earliest of the Hybrids. Nice size ears with yellow dent type large grains of yellow color. Very high shell-out. Similar to No. 18. Good shuck cover—more insect resistant. Strong sturdy stalk and excellent root system. Drought resistant. Adapted to all corn-growing regions of the state. Try this number—you'll like it!

Texas

NO. 28 Another Double-cross Yellow Hybrid. A really fine corn. Contains Yellow Surcropper inbreds making it similar to No. 8. Has wide range of adaptability and will give heavy yields in all corn-growing areas of the State. Produces large ears and large grain of good yellow color. Matures early. Has fine shuck protection and is therefore more resistant to ear-worms and weevils. Drought resistant heavy stalk and fine root system. Increases yields 20% to 35% over ordinary corns. Get some of this good Hybrid!

Texas

NO. 30 This is a Double-cross Yellow Hybrid giving an excellent performance in the field. It has a grand pedigree of four great inbred strains. Widely adapted to all types of corn growing soils and gives increased yields ranging up to 35% and often more over ordinary corns. Has nice, large ears with deep golden grain. This corn has good root system, stout stalk that stands up well, and is highly resistant to root lodging. Early maturing. Be sure to plant some of this number the coming season.

Texas

NO. 32 This is a new Double-Cross Yellow Hybrid consisting of a combination of four outstanding inbred lines. Well adapted to the various types of corn growing lands and under average normal conditions increased yields up to 35% or more over ordinary corns can often be obtained—Produces nice ears of deep golden grain, has good shuck cover and sturdy stalk with excellent root system—Matures early and is drought resistant—Plant some of this along with your other favorite numbers.

GREAT NUMBERS

Texas

NO. 34 One of the Newest Yellow Hybrids—Particularly adapted to the coastal areas—excellent shuck cover—resistant to insects, earworms and diseases—tall vigorous plants that stand well—greater vegetative growth makes it a wonderful silage corn—long cylindrical ears of high quality grain—good yields in areas of high humidity and rainfall.

Texas

NO. 36 A new early Double-cross Yellow Hybrid—more heat and drought tolerant—heavy, sturdy, slightly shorter stalks with good standability—matures early and has good shuck cover—gives increased yields up to 35% more—shelling percentage very good—nice ears with grain of good yellow color—widely adapted—Plant some—you'll like it.

Texas

NO. 36A The newest early corn Hybrid is a modified Texas 36. Combines consistently high yields with earliness. Texas 36A is a yellow, Double-cross Hybrid which produces one to two medium size ears per plant with good husk cover. Grain color and shape are desirable and shelling percentages compare favorably with other Yellow Texas Hybrids. Texas 36A was produced in an effort to fill the need for an earlier drought-tolerant hybrid which has better standability.

Texas

NO. 38 A brand new Yellow Double-cross Hybrid—extra early maturing—frequently escapes heat and drought due to early maturity—has low ear placement and plant is slightly shorter—recommended for droughty areas and where early maturity is desired—very resistant to root lodging and stalk breaking—dependable yields—good resistance to insects and earworms—This is a special purpose hybrid where quick maturity is of value.

Texas

NO. 17W Here is the Newest Double-cross White Hybrid composed of four fine inbred strains. A quick maturing exceptionally drought resistant corn especially adapted to the drier areas of the State but does well on all corn growing soils. Good root system, stands well and has stout, sturdy stalk. Nice size ear with large flat grains well set on cob. Makes heavy yields up to 35% more than ordinary corns under normal conditions. Be sure and get some of this brand new White for your next planting.

MAKE MORE CORN PROFITS!

GREAT STRAINS

BAGLEY BRAND

Cotton

TEXAS' FINEST...

BAGLEY'S NEWEST . . . *Storm-Tex*

PULLER-STRIPPER COTTON

Bagley *Storm-Tex* 157 Cotton

Newest of the New—An outstanding strain developed and produced on Bagley's experimental seed farms is now being released in very limited quantity. This cotton has given an excellent performance in tests plots and increase plantings. Designed to meet the present cotton production needs, it is a PULLER-STRIPPER COTTON with GOOD STORM RESISTANT QUALITIES. It has big bolls (about 55 bolls make pound of seed cotton), locks are tight in bur, lint turn-out about 38 to 40%, has good strong, uniform 15/16 to 1-1/32 inch staple, and is drought resistant. A good combination that will make you more cotton profits—Supply of this seed is very limited so we suggest you ORDER EARLY!

Bagley Select Deltapine

An exceptionally heavy yielder. Best suited to bottom land or rich, flat, level land. Also gives good results on upland. Well adapted. Grows rapidly, sets fruit quickly, matures and opens early. Foliage very light—more insect resistant. Upright sturdy stalk with well-spaced, lengthy, short-jointed fruiting branches. Medium bolls that open well and pick clean. About 70 to 80 bolls make pound seed cotton. Fruits heavily and 10% to 25% increased yields are often obtained. Ordinarily lint turnout runs 39% to 41% and good uniform staple of 1 inch to 1-1/16 inch dependent on soil and season. Seed are small to medium with well-filled kernels. Supply of this seed is very limited, so order early!

COTTONS THAT MAKE YOU

STORM RESISTANT

**BIG
BOLLS**

**GOOD LINT
TURN OUT**

**GOOD STRONG
UNIFORM STAPLE**

BRED TO SUIT YOUR LAND!

Bagley 64 Master Strain

Newest of the Bagley Master Strain Cottons. Suited to upland, flat and bottom land. Grows off fast, fruits heavily, matures early. Strong, sturdy stalk with short-jointed fruiting branches and light foliage. Majority 5-lock easy-to-pick bolls. A good snapping cotton. 50 to 60 bolls per pound seed cotton. Deep root system—drought resistant. Gin turn-out of 39% to 41% and excellent staple of $31/32$ to $1-1/32$ inch according to soil and season. High in varietal purity. You'll enjoy growing this new, different, better cotton!

Bagley B-17 Royal Rowden

Best yielding Rowden type. Well adapted to wide range of soils and climate suited to cotton growing. Comes up and grows off fast. Matures early. Strong stalk with well-spaced fruiting branches. Big, fluffy bolls (50 to 60 per lb. seed cotton) that are easily picked or snapped. Light foliage. Good tap and lateral roots—drought resistant. Lint turn-out 37% to 40% and hard, strong, uniform $31/32$ to $1-1/16$ inch staple depending on soil and season. A truly good cotton—try it!

Bagley 793 Master Strain

A well balanced, high yielding cotton. Adapted to wide range of growing conditions—suited to most all cotton growing soils. Fruits fast—matures early. Big bolls that pick or snap easily. Deep root system—drought resistant. Sturdy stalk. Medium foliage. Strong, uniform $15/16$ to $1-1/32$ inch staple and gin turn-out of 39% to 41% dependent on soil and season. A good field performer—grow some!

MORE DOLLARS PER ACRE

PLANT THE BEST!

BAGLEY BRAND

Texas Hybrid Sorghum

Texas

RS 608 An early maturing red-seeded hybrid that gives excellent yields. Heads have good exertion above top leaf which is an aid in combining. Produces well-formed heads that dry out as they mature. Combines well and is widely adapted to sorghum growing areas. Drought resistant. Grow some—you'll like its performance.

Texas

RS 610 A fast growing early blooming hybrid. Head extends well above top leaf. Produces large orange-reddish seed. Greater yields and adapted to combine harvesting. Superior seedling vigor and rapid growth. Well adapted to most all sorghum producing areas. Drought resistant. Try some of this new hybrid this season.

Texas

620 Another early hybrid. Head extends well above top leaf. Increased yields. Quick emergence and vigorous sturdy plants. Uniform maturity. Grows nice heads with reddish seed. Drought resistant. Widely adapted and suited to combine harvesting. Get some—see how you like it.

REALLY FINE HYBRIDS

BAGLEY
B R A N D

GOLD TEX

HYBRID SEED CORN

These new yellow hybrids are grown and sold exclusively by W. W. Bagley & Sons to make available to you top-quality hybrids which have incorporated in them the very best features most desired by corn growers. These are truly outstanding corns that have shown up exceptionally well in our test block plantings.

BAGLEY'S NEW GOLD-TEX 86 HYBRID CORN

Double-cross yellow hybrid developed from four fine inbred strains—An outstanding corn—Very good yielder often producing 25% to 35% over ordinary varieties—Matures early—has good shuck cover—more insect resistant. Strong sturdy stalks with excellent root system. Drought resistant. Deep yellow dent type grain—excellent shell-out. Widely adapted to all corn growing soils.

BAGLEY'S NEW GOLD-TEX 88 HYBRID CORN

Yellow hybrid that produces large ears of deep golden grain—often increases yields of 25% to 35% over ordinary corns. Well adapted to all corn growing soils. Excellent root system and sturdy stalk. Good shuck cover—extra resistance to insects and ear worms. Very drought resistant and matures early. Shelling percentage very good.

Introducing

BAGLEY "SU-TEX"
BRAND

A Sorghum-Sweet Sudan Grass Hybrid

Bagley's "Su-Tex" is a grazing hybrid produced by pollinating male sterile sorghum with Sweet Sudan grass pollen. Under normal condition it has the ability to produce 35% to 50% more forage than ordinary Sudan. Its inherent hybrid vigor enables "Su-Tex" to grow much faster than most Sudan. You can have quick grazing by planting this good hybrid. It is recommended that you use the same grazing practices and precautions as with standard Sudan grass varieties.

SWEET-TEX 2 *Hybrid Sweet Corn*

One of the latest sweet corn hybrids—Produces heavily and makes nice sized ears with good shuck cover—Very resistant to ear worms—Makes roasting ears of excellent flavor—Ideal and outstanding for home gardens. Try some—you'll like it.

OPEN-POLLINATED CORNS

YELLOW DENT—This is a very popular corn and widely planted—our latest strain. Matures early and has big ears well set with large, deep kernels.
YELLOW SURCROPPER—A well-known variety, widely grown because of its earliness, drought resistance and productivity. Produces nice size ears with light yellow grains.

WHITE SURCROPPER—A dependable corn because of its fine drought resistance. Makes good size ears well covered with broad white grains.
